

In addition to expertise in **Locating & Mapping**, **On-The-Mark** offers a number of other innovative and cost effective services including:

- ⊕ **Maintain The Marks** – This is an innovative and cost effective program to help protect you from paying for damages caused by not properly maintaining stakeout marks (in adherence to Code Rule 753 law). In this program, prior to digging, we create a digital video record of your site, we measure and document marks using physical site datums, and we re-establish all missing marks per your request throughout your excavation process.
- ⊕ **Cathodic Protection** – This program utilizes a well known technique to control the corrosion of underground metal piping by making it the cathode of an electrochemical cell. It uses sacrificial anodes and test stations strategically placed throughout your utility line.
- ⊕ **Infrastructure Management Services** – This is a comprehensive program including Underground **Locating, Marking, Mapping, Damage Protection, Cathodic Protection, Locate Underground Electric Faults, etc.** In this program On-The-Mark is your Property Management partner for all underground utility management.

All of these programs help to protect your private residential or commercial property investment. Not only saving you thousands and tens of thousands of dollars but protecting your multi-million dollar investment.

Avoid Excavation Damage & Costs

Underground Utility Locating

On-The-Mark employs non-invasive detection instrumentation. No digging required. Highly trained and experienced technicians specialize in accurately locating underground utilities.

Detecting Equipment & Instruments

Using state-of-the-art detection equipment including Ground Penetrating Radar (GPR), **On-The-Mark** can locate:

- ⊕ Gas and Propane Pipes
- ⊕ Underground Storage Tanks
- ⊕ Water Pipes
- ⊕ Sewer Pipes
- ⊕ Irrigation and Drainage Pipes/Tanks,
- ⊕ Empty Ducts, Metal Valve Boxes,
- ⊕ Fuel Tanks, Conduits and
- ⊕ Other Buried Objects

In addition, we can detect & locate telephone lines, television/cable lines, power cables, etc.

Mark Out & Mapping

Immediately following location completion of subsurface utilities, an **On-The-Mark** mapping technician collects field map drawings with measurements, or maps provided from the customer to create updated layouts. Maps are provided in GIS, CAD, or hard copy. All maps include color coded utilities with symbols explaining existing structures, original on-site building size and measurements.

Using Utility-Recognized Identification

Red		Electric
Orange		Telephone; Cable TV; Fire and Police Communications
Yellow		Gas and Oil
Green		Storm Drains
Blue		Water Systems
Brown		Sewer Systems
Pink		Surveying

Skilled & Experienced Technicians

On-The-Mark services are an asset in planning excavation, construction/engineering, property renovation, landscaping, or plumbing. All of our technicians are Northeast Gas Association (NGA) Operator Qualified and tested in the field of underground facility management. Every technician has over 25 years of experience and in-depth working knowledge of underground facilities, buried structures and supporting the safe digging regulations of "Dig Safe New York".
